

GETTING MATHEMATICAL

Math is connected to all research projects. Some examples are the size of the planets, the life span of different animals, timelines, sports statistics, and more.

1. While you read your book, look for math facts.
2. Create 5 math problems using information from your book.

FACT: The Titanic sank in 1912. Its location was discovered in 1985.

MATH PROBLEM: How long did it take for the Titanic to be discovered on the ocean floor?

FACT: Americans eat about 500,000,000 pounds of popcorn each year.

MATH PROBLEM: How much popcorn would be eaten in 5 years?

FACT: Insects have 6 legs, 3 body parts and 2 antennae.

MATH PROBLEM: There are 4 insects. How many legs, body parts, and antennae are there altogether?
